SYNOPSIS

7 Problem Statement

Create a system which delivers orders of medicine to different customers and different medicinal stores

8 Abstract

Our project is basically used to fulfill the pharmacy needs of customers. A medicinal store is located in Camp,Pune.Every Sunday it collects many orders from registered customers all over the city.These orders may include those from people who are the regular customers or medicinal stores and hospitals who require medicine in abundance.

It collects the orders from registered customers and tries to deliver the orders in a minimum amount of distance so as to maximise the amount of orders to be fulfilled in a day and to fulfill the needs.

9 Goals and Objectives

The main objective of this project is to make the pharmacy available to customers in the city.It helps the local medicinal drug stores and hospitals so as the medicine can be to many people in advance.
